ABOUT THE BOOK

This textbook tells the story of community psychologists, who view social problems as being due to the unequal distribution of resources, which causes poverty, homelessness, unemployment, and crime. In addition, because no condition or disease has ever been eliminated by just dealing with those with the problem, community psychologists focus their work on prevention. Finally, community psychology shifts the power dynamics so that community members are equal members of the team, as they provide unique points of view about barriers that need to be overcome in working toward social justice. In a sense, this field has many similarities with community organizing, but it's different in that community psychologists have both research and action skills to evaluate whether or not our interventions actually work.

This textbook is only supported on Firefox, Chrome, Safari, and Microsoft Edge. Internet Explorer is not compatible with our formatting. We thank Mark Zinn, our front end developer, for his help in uploading and formatting our content.
